Eaton 9PXM UPS

A scalable, modular, flexible solution for a wide range of applications.

Plan > Grow > Manage

Highest level of reliability. Lowest cost of ownership.

The Eaton® 9PXM UPS is a scalable, modular, flexible solution that combines the highest level of reliability with the lowest cost of ownership in the 4–20 kVA range. The 9PXM enables you to build a power solution specific to your needs, and to expand redundancy and runtime as your needs change.

The plug-and-play power and battery modules are user replaceable so customers can add them as needed without a service call or having to put a redundant system in bypass. With its low initial investment, online double-conversion technology, Eaton ABM® technology and high efficiency mode, you never have to compromise reliability for efficiency.

and battery modules

Versatile data center applications

The versatile 9PXM is well suited for both the IT marketplace and for Industrial/commercial applications. The 9PXM's high power rating, small footprint and easy rack conversion make an ideal solution for an array of data center applications. The design features offer harmonious compatibility with 4-post or high density racks, PDU and network gear for seamless integration into an IT infrastructure.

IT applications include:

Small / Medium Data Center

Colocation Data Center

Edge Data Center

Network Closets

The 9PXM is rugged enough to stand up to mission critical applications, and it's small footprint, customizable output options and N+X redundancy are valuable features in the retail/financial and government sectors.

Industrial/commerical applications include:

Mission critical operations

- Small computer rooms
- Server farms
- 911 call centers

Retail/Financial

- POS equipment
- Banking automaton software systems
- Retail back office inventory management systems

Government

- Voice and data networks/closets
- Government computer rooms
- School system computer rooms/classrooms

Hot-swap modularity

Customization

Flexibility for every application.

- 1 Form factor: Two tower sizes convertible to rackmount.
- Configurable back panel: Build-to-order configurations provide receptacle output options.
- Redundancy: N+X redundancy for power and logic eliminates system-level single point of failure.
- 4 Scalability: Add power and battery modules to scale up power rating or add redundancy.
- Flexibility: Add battery modules to any slot for extended back up runtime in a single unit cabinet.
- 6 Hot-swappable modules: Lightweight power and battery modules allow users to replace without shutting down.

Battery module

Automate and control

IPM is an on-site policy-based automation software platform that triggers advanced remediation actions—like shedding non-critical workloads to extend battery runtime—during a power event to ensure that critical equipment remains running as long as possible.

In other words, IPM automatically takes action when it notices something awry—once configuration and action policies are set, IPM does the work. This increases uptime and saves time and money by allowing you to remotely solve power issues.

Monitor IT power infrastructure

VPM excels at remotely monitoring large and distributed deployments of power devices. The easy-to-use, visual interface provides a live floorplan view with alarm notifications for up-to-the-minute health status on your power infrastructure.

Use VPM to better visualize your power infrastructure allowing you to take action as needed to maintain continuous uptime of your critical applications.

Learn more at Eaton.com/VPM

Visual Capacity Optimization Manager

Monitor IT and facilities power infrastructure

VCOM, our data center system optimization (DCSO) platform, provides our greatest level of business intelligence by monitoring both IT and facilities power infrastructure which makes it ideal for large or multisite management.

VCOM features capabilities designed to reduce data center operational expenses, improve system and application reliability and mitigate risk through data analysis.

How to configure your unit

Select a configure-to-order (CTO) number to reflect the cabinet form factor and output configurations.

As you select the options needed, they will become part of the CTO number. Order power modules, battery modules, external battery cabinets, bypass switches and other external options as separate line items. Part numbers for external options are provided in the CTO guide.

Output connection configuration is designated by five digits within the unit CTO number.

These 5 digits allow selection of the type and quantity for up to a maximum of 5 different types of receptacles. For hardwired output, use AAAAA for a 12-slot cabinet and AAXXX for an 8-slot.

- 8-slot cabinet maximum 2-outlet output panels
- 12-slot cabinet maximum of 5-outlet output panels
- Outlet quantities per panel are pre-set
- Enter desired outlet configuration from bottom to top (digit 9 of the CTO number will be installed in the bottom outlet panel, digit 10 in the panel above it, etc)
- For an 8-slot cabinet, digits 9–11 will always be XXX (ex: BE XXX)

How to build your CTO number

9PXM08AAXXX

	Outlets per panel 0 4 8 4 2 2 2 2 2								

Output connections

Scalable to 20 kVA (N+1)

- 8-slot is scalable 16 kVA in a 14U cabinet
- 12-slot is scalable to 20 kVA (N+1) in a 21U cabinet

Variety of power distribution options

- Hardwire and connect with an Eaton rack PDU
- Create custom outlet configuration for output
- Bypass power module configured for any application
- External battery cabinet for extended runtime

Design benefits

- Easy conversion from tower to rackmount
- Single frame cabinet
- Hot-swappable power and battery modules
- ABM technology. It's not just for battery monitoring. Main value prop is that it increases battery service life by 50%
- Two communications ports system monitoring
- Higher efficiency mode increases from normal operating efficiency of 94 to 97 percent efficiency

8-slot cabinet is scalable to 16 kVA in a 14U cabinet

12-slot cabinet is scalable to 20 kVA (N + 1) in a 21U cabinet

External options

External options are ordered as separate line items including:

- Power modules
- Battery packs
- External battery cabinets
- Bypass switches
- Other external options

9PXM CTO configuration guide

9PXM cabinet can be ordered using a pre-configured catalog number or by using the CTO process. Pre-configured catalog numbers which will include a cabinet with the quantities of power modules, battery modules and outlet configurations appropriate for the power rating and input/out configuration outlined in the table below. To order options not offered by pre-configured catalog numbers, please see the CTO guide on page 5.
